SAM'S 2-WEEK COLONY CARE

3 adult females

CHECK ONCE EACH DAY • CALL VINCENT IF UNSURE

1 CHECK TEMPERATURE + HUMIDITY

IDEAL	**24–30°C • 60–75%**
WATCH	**20–32°C • 50–80%**
CALL VINCENT	**<18 / >33°C • <45 / >85%**

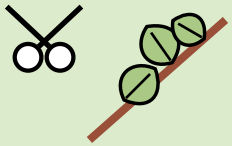
Use the enclosure sensor. A brief WATCH reading is okay; recheck in 1 hour.

2 WINDOWS • DOOR • AC

1. **NORMAL**
   Door + window open for airflow
2. **TOO HOT**
   Open both fully; use AC only if needed
3. **AC ON / RH FALLING**
   Close the door first; no direct cold air

After any change: check again in 1 hour.

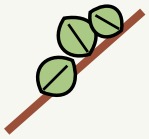
3 FRESH FOOD



- ✓ CUT the bottom of each stem
- ✓ RINSE the full branch with cool water
- ✓ REMOVE obviously wilted branches
- ✓ **KEEP ≥1 fresh branch at all times**

Use a MIX of GUAVA + WAX APPLE.

4 EXTRA MANGO, IF NEEDED



- ✓ **Use mature green leaves**
- ⊗ **NO red / newly formed leaves**

Extra food only — guava + wax apple remain the main supply.

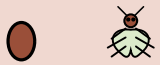
5 FLOOR CHECK

- ✓ **Pick up obvious eggs**
  Put them in the egg container
- ✓ **Frass can stay — do not worry**

NO MISTING

Even if humidity is in WATCH range.

LETIRANTI HATCHLING?



DO NOT TOUCH • CALL VINCENT WITHIN 24H

A hatch is unlikely — just leave it where it is.

Daily rhythm: SENSOR → AIRFLOW → FRESH LEAVES → EGGS → DONE

Pulchriphyllium pulchrifolium
